25     ;
26     ; The TTMAP and TTMAPX macros are used to map kernel-mode par6 to the
27     ; terminal character buffer area. The previous contents of par6 map
28     ; register are pushed on the stack and may be restored by using the
29     ; UNMAP or UNMAPX macros.
30     ; R1 must contain the line index number of the line whose buffers
31     ; are being accessed.
32     ; The difference between the TTMAP-UNMAP macros and the TTMAPX-UNMAPX
33     ; macros is that the X-versions are more efficient but may only be
34     ; used from within interrupt service routines where we are guaranteed
35     ; to be running on the system stack.
36     ; The TTMAP and UNMAP versions of the macros must only be
37     ; used in sections of code where the interrupts are disabled.
38     ;
