MAY BE REQUIRED FOR
PROGRAM TO OPERATE

1. ABSTRACT:

DXA IS A IOMODR THAT EXERCISES THE DX11 IN THE OFF LINE STATE.

2. REQUIREMENTS:

HARDWARE: ANY DX11 CONTROLLER INTERFACED WITH A PDP-11.
STORAGE: DXA REQUIRES:
1. DECIMAL WORDS: 280
2. OCTAL WORDS: 0430
3. OCTAL BYTES: 1060

3. PASS DEFINITION:

ONE PASS OF THE DXA MODULE CONSISTS OF TRANSFERING THE
BUFFER 10000 TIMES. (512 BYTES IN THE BUFFER)

4. EXECUTION TIME:

DXA RUNNING ALONE TAKES APPROXIMATELY FORTY-FIVE SECONDS.

5. CONFIGURATION REQUIREMENTS:

DX11 MUST BE FIRST ON THE UNIBUS.

6. DEVICE/OPTION SETUP:

NONE.

7. MODULE OPERATION:

THIS MODULE IS WRITTEN TO EXERCISE ONE DX11B FRONT END OPTION. THERE IS ADDRESS SPACE RESERVED FOR TWO DX11B'S, THE FIRST AT 776200 AND THE SECOND AT 776240. THIS MODULE MAY BE CONFIGURED TO RUN THE DX AT EITHER (BOTH BY CALLING TWO MODULES) OF THESE ADDRESSES. THE FUNCTION OF THIS MODULE IS TO VERIFY THE DX11 CAN EXECUTE FAST NPR DATA TRANSFERS. THIS ACCOMPLISHED THROUGH THE UTILIZATION OF THE SERVICE-OUT/SERVICE-IN ENABLE FLOP. FOLLOWING THE INITIALIZATION OF THE OFFSET AND STATUS (DXOS) REGISTER WITH THE ADDRESS OF THE STATUS POINTER WORD (#SPW) TABLE, THIS LOCATION AND THE NEXT 1000(8) BYTES ARE CLEARED. THE ZEROED SPW CAUSES THE DX TO BYPASS STATUS PRESENTATION FROM THE DST (DEVICE STATUS TABLE) AND PRESENT ZERO AS IMMEDIATE STATUS. THIS ALLOWS THE SPW TO SECOND AS A DATA BUFFER. THE DATA TRANSFER IS INITIATED BY LOADING THE MAINTENANCE-OUT (DXMO) REGISTER WITH OPLO! PARITY! DATA. THE BUS ADDRESS (DXBA) REGISTER IS POINTING TO THE #SPW AND THE BYTE COUNT (DXBC) IS SET FOR 1000(8) BYTES. AT THIS POINT THE FUNCTION BITS ARE SET TO DO A FUNCTION INPUT AND GO. THE DATA TRANSFER DOES NOT START UNTIL THE SELECTION SEQUENCE IS COMPLETE AND SOSIEN (SRVO-SRVIENABLE) IS SET. AT THAT THE DX EXECUTES NPR'S UNTIL THE BYTE COUNT GOES TO ZERO. AT THAT POINT THE TUMBLE TABLE ENTRY IS MADE INDICATING THE COMPLETION OF THE TRANSFER AND AN INTERRUPT IS REQUESTED TO SERVICE THAT EVENT. THE INTERRUPT SERVICE ROUTINE GOES ON IMMEDIATE PIRQ BEFORE DOING ANY STATUS OR DATA CHECKS. THEREFORE THERE SHOULD BE NO BR LATENCY PROBLEMS. WITHIN THE SERVICE ROUTINE TWO STATUS CHECKS ARE MADE (DONE FOR FALSE INTERRUPTS, AND NPRTO FOR NPR TIME OUTS) FOLLOWING THESE THE DATA IS VERIFIED. AS THE DATA IS CHECKED THE BUFFER IS ZEROED FOR THE NEXT TRANSFER AND THE CYCLE IS REPEATED.

8. OPERATING OPTIONS:

NONE.

9. NON-STANDARD PRINTOUTS:

NONE.

DXLL OFFLINE EXERCISER MODULE
