0031 1     DEBUG
0032 1
0033 1 ABSTRACT:
0034 1
0035 1     This module contains the command parse and execution networks to support
0036 1     the STEP and the GO commands.
0037 1     Parsing is done by means of ATN's. During parsing, a
0038 1     linked list known as the command execution tree is constructed. This
0039 1     tree contains components which represent keywords and operands of the
0040 1     user's input command. The command execution tree is passed to the command
0041 1     execution network as input.
0042 1

: 135 0266 1 GLOBAL ROUTINE DBG$NPARSE_STEP (INPUT_DESC, VERB_NODE, MESSAGE_VECT) =
: 136 0267 1
: 137 0268 1 FUNCTIONAL DESCRIPTION:
: 138 0269 1
: 139 0270 1 This routine comprises the ATN parse network for the STEP command.
: 140 0271 1 During processing, other routines are invoked to capture operands.
: 141 0272 1 This routine recognizes keywords and constructs a command execution tree
: 142 0273 1 to be used as input to the command execution network. Upon detection of
: 143 0274 1 errors, a message argument vector is constructed and returned.
: 144 0275 1
: 145 0276 1 FORMAL PARAMETERS:
: 146 0277 1
: 147 0278 1 INPUT_DESC - A longword containing the address of a standard ascii
: 148 0279 1 string descriptor representing the user's input
: 149 0280 1
: 150 0281 1 VERB_NODE - A longword containing the address of the verb (head)
: 151 0282 1 node of the command execution tree. The string corresponding
: 152 0283 1 to the verb has already been processed upon entry.
: 153 0284 1
: 154 0285 1 MESSAGE_VECT - The address of a longword to contain the address of a
: 155 0286 1 message argument vector on errors
: 156 0287 1

: 362 0490 1 GLOBAL ROUTINE DBG$NEXECUTE_GO (VERB_NODE, MESSAGE_VECT) =
: 363 0491 1
: 364 0492 1 FUNCTIONAL DESCRIPTION:
: 365 0493 1
: 366 0494 1 This routine accepts the command execution tree constructed by the parse
: 367 0495 1 network and performs the semantic actions associated with the parsed
: 368 0496 1 GO command as given by the user. The actual GO is not performed by this
: 369 0497 1 routine. Rather the DEBUG monitor is informed to perform a GO.
: 370 0498 1
: 371 0499 1 FORMAL PARAMETERS:
: 372 0500 1
: 373 0501 1 VERB_NODE - A longword containing the address of the verb (head)
: 374 0502 1 node of the command execution tree
: 375 0503 1
: 376 0504 1 MESSAGE_VECT - The address of a longword to contain the address of a
: 377 0505 1 standard message argument vector upon detection of
: 378 0506 1 errors.
: 379 0507 1
: 380 0508 1 IMPLICIT INPUTS:
: 381 0509 1
: 382 0510 1 The entire command execution tree linked list pointed to by the verb node.
: 383 0511 1
: 384 0512 1 IMPLICIT OUTPUTS:
: 385 0513 1
: 386 0514 1 NONE
: 387 0515 1
: 388 0516 1 ROUTINE VALUE:
: 389 0517 1
: 390 0518 1 An unsigned integer longword completion code
: 391 0519 1
: 392 0520 1 COMPLETION CODES:
: 393 0521 1
: 394 0522 1 STSSK_SUCCESS (1) - Success. The GO command will be executed.
: 395 0523 1
: 396 0524 1 STSSK_SEVERE (4) - Failure. THE GO will not executed. Message argument
: 397 0525 1 vector constructed and returned.
: 398 0526 1
: 399 0527 1 SIDE EFFECTS:
: 400 0528 1
: 401 0529 1 Semantic actions coresponding to the execution of the GO command are taken.

The image displays a grid of 144 small terminal window screenshots, arranged in 12 rows and 12 columns. Each window shows a different view of a system's internal state or a specific diagnostic tool's output. Several windows are prominently labeled with titles such as 'DBGSYMBOL LIS', 'DBGSTO LIS', and 'DBGSYMBOLZ LIS', which likely refer to debugging or system monitoring utilities. The content within the windows is dense and technical, consisting of lists of data, command-line prompts, and status messages. The overall appearance is that of a multi-processor system's control console, where each terminal represents a different node or component being managed or debugged.
