VAX-11
Information Directory

Order No. AA-D016B-TE

READ THIS FIRST

VAX11

February 1979

This document provides an introduction to the software documentation set shipped with the current version of the VAX/VMS operating system. It provides a synopsis of each document in the basic set and of each optional document. The order number of each document is also identified. To help you locate key information, a topical index is provided to direct you to the specific document containing that information.

PREFACE

MANUAL OBJECTIVES

The *VAX-11 Information Directory* describes the manuals in the VAX/VMS document set, and provides a topical index to the documentation.

INTENDED AUDIENCE

This manual is intended for all VAX/VMS users. One of its functions is to guide each reader to the manuals most suited to his or her needs.

STRUCTURE OF THIS DOCUMENT

This manual begins with brief descriptions of the document set and system installation, and then contains two main segments:

- Information about each manual in the document set. Section 3 identifies the title, order number, and intended audience of each manual. Section 4 provides a synopsis of each manual.
- A topical index. Section 5 lists major topics and the manuals in which they are treated. This index covers the manuals in Volumes 1 through 3; it does not refer to documents for RMS-11, SORT, and optional software components.

SUMMARY OF CHANGES

This revision adds information about the following new manuals:

- *VAX/VMS Guide to Writing a Device Driver*
- *VAX-11 Guide to Creating Modular Library Procedures*
- *VAX-11 SORT User's Guide*
- Manuals for BLISS and VAX-11 COBOL

Several other manuals in the VAX/VMS document set have been revised or updated for this release. Their order numbers and descriptions have been changed as needed.

1.0 INTRODUCTION

The VAX/VMS software release distribution kit includes a software documentation set that contains programming and operating information associated with the VAX/VMS operating system. DIGITAL ships a complete software documentation set with each software system; however, the number and type of documents shipped to an installation depend upon the license or licenses that the customer has purchased.

All VAX/VMS customers receive the basic software documentation set consisting of the documents packaged in Volumes 1 through 4 (see Section 3.0 for details). Customers receive optional documentation packaged in Volume 5 only when they purchase a special license or licenses for optional software.

2.0 SYSTEM INSTALLATION

The VAX/VMS base-line system that you receive is ready to run on your VAX-11/780 processor. However, the base-line system must be installed, following the installation procedure contained in the *VAX-11 Software Installation Guide*, to produce a system that is tailored to the specific hardware and software requirements of your facility.

If you have purchased licenses for optional software components, you must perform the applicable installation procedures. These are contained in the *VAX-11 Software Installation Guide* or a separate installation guide.

Before performing any installation, you should read the *VAX/VMS Release Notes* thoroughly. This document contains important update information correcting any errors or noting any changes in the software and documentation.

3.0 HOW THE DOCUMENTS ARE ORGANIZED

The documents are packaged in five volumes. The information contained in the various volumes is categorized as follows:

- Volume 1 — System Reference
- Volume 2 — System Procedures
- Volume 3 — VAX/VMS I/O
- Volume 4 — RMS-11/SORT
- Volume 5 — Optional Software

Each volume may consist of several ring binders; each binder may contain several documents. Table 1 lists the documents in the set, with their order numbers and suggested audiences. Check your documents to make sure you received the complete documentation set. Keep in mind that you receive optional documentation only when you purchase a special license for a software component.

The audiences for each document are identified by an "X" in one or more of the right-hand columns of Table 1. The job titles used in Table 1 are described as follows.

- The *system manager* is responsible for overall operation of the VAX/VMS system. This includes installing the system, overseeing its performance, and supervising day-to-day operations.
- The *system programmer* uses VAX-11 MACRO assembly language (or a development language) to maintain, modify, and develop system programs. These programs are used to operate the VAX-11/780 processor and its peripherals.
- The *application programmer* uses high-level languages (FORTRAN IV-PLUS, FORTRAN IV, COBOL, BASIC-PLUS-2) to develop programs for user applications.
- The *operator* is anyone who uses the VAX/VMS system directly to do work.

*Available under separate license.

These job titles are loosely defined, but they are useful for indicating the general audience intended for each document. In small installations, all tasks may be performed by a single individual. Elsewhere, an application programmer might program in assembly language and a system programmer might be responsible for system management. When functions overlap, you should make appropriate adjustments from the suggested audiences given in Table 1.

4.0 VAX-11 SOFTWARE DOCUMENT DESCRIPTIONS

The following sections contain brief synopses of each document in the VAX-11 software documentation set. Documents marked with an asterisk (*) are associated with major optional software components available with the current version of VAX/VMS. You receive these documents only when you purchase the license for the associated software component.

4.1 VAX-11 Information Directory

This document provides an introduction to the software documentation set shipped with the current version of the VAX/VMS operating system. It provides a synopsis of each document and a topical index that directs the user to the appropriate documents.

4.2 VAX/VMS Summary Description

This document introduces the basic concepts of the operating system and contains a glossary of VAX-11 terms.

4.3 VAX/VMS Primer

This document provides a tutorial introduction to the command language, and introduces operating system concepts of interest to general programmers and users.

4.4 VAX/VMS Release Notes

This document contains information not included elsewhere in the documentation set. Typically, this information covers software and/or documentation errors that were discovered or changes that were made late in the development cycle, plus hints concerning system installation and operation. This document should be read before the system is installed or used.

4.5 VAX-11 Software Installation Guide

This document contains instructions for installing the VAX/VMS system and the optional software components.

4.6 VAX/VMS System Services Reference Manual

This document describes the VAX/VMS system services. It provides coding conventions, examples of how to use system services, and detailed reference information on the arguments required by each system service.

4.7 VAX/VMS Command Language User's Guide and Update Notice No. 1

This document describes the command language. It provides detailed reference information and examples of all commands available to general users.

4.8 VAX-11 Linker Reference Manual

This document provides the information required for linking object modules into executable, shareable, or system images.

4.9 VAX-11 Symbolic Debugger Reference Manual

This document contains the information required for debugging assembled and linked object programs, primarily those written in VAX-11 MACRO assembly language.

4.10 VAX-11/RSX-11M Programmer's Reference Manual

This document describes VAX/VMS support of the RSX-11M executive directives. It contains the information needed by an RSX-11M programmer responsible for making RSX-11M Version 3.1 task images run under VAX/VMS.

4.11 VAX-11/RSX-11M User's Guide

This document provides the information needed to use the VAX/VMS MCR command language, execute MCR indirect command files, and use RSX-11M components under VAX/VMS.

4.12 VAX-11 MACRO Language Reference Manual

This document describes the assembly language supported by VAX/VMS. All symbols, expressions, addressing modes, and directives are detailed. No prior knowledge of the VAX-11 MACRO assembler is assumed.

4.13 VAX-11 MACRO User's Guide

This document contains information that an assembly language programmer needs to use the capabilities of the VAX-11 MACRO assembly language efficiently.

4.14 VAX-11 Common Run-Time Procedure Library Reference Manual

This document contains detailed reference information that describes the general-purpose procedures of the VAX-11 Common Run-Time Procedure Library. It also describes how library procedures are called and provides programming techniques.

4.15 VAX-11 Guide to Creating Modular Library Procedures

This document describes how to design and code modular procedures so that they can be installed in an object module library or in a shareable image. It also includes standards and recommendations for modular programming.

4.16 VAX-11 Text Editing Reference Manual

This document describes in detail the features and use of the two text-editing programs provided with VAX/VMS: SOS, an interactive editor, and SLP, a batch-oriented editor.

4.17 VAX/VMS Operator's Guide

This document contains descriptions of operating procedures and commands needed by a system operator. It also describes the messages produced by the Operator's Communication Process (OPCOM).

4.18 VAX/VMS System Manager's Guide

This document describes the tasks associated with VAX/VMS system management. They include setting up user accounts, managing public files and volumes, controlling overall system performance, monitoring system activity, and recognizing and dealing with errors and failures.

4.19 VAX/VMS System Messages and Recovery Procedures Manual

This document contains a list of system messages. For most messages, descriptions and suggested recovery procedures are also provided.

4.20 VAX/VMS UETP User's Guide

This document describes the functions of the User Environment Test Package (UETP) and provides operating instructions for running the package.

4.21 VAX-11 Disk Save and Compress User's Guide

This document explains the capabilities and usage of the two Disk Save and Compress (DSC) utilities that are used for copying Files-11 disk files to either disk or magnetic tape, and from magnetic tape back onto disk. It is intended for users with some VAX-11/780 experience and some familiarity with VAX/VMS operating system concepts and procedures.

4.22 VAX/VMS I/O User's Guide and Update Notice No. 1

This document contains the information needed to interface directly with the I/O device drivers using VAX/VMS system services (for example, the Queue I/O system service) supplied as a part of the operating system. This document does not contain information on I/O operations using VAX-11 Record Management Services (RMS). The update notice describes the use of the LPA11-K driver and the high-level language procedure library that interfaces with this driver.

4.23 VAX/VMS Guide to Writing a Device Driver

This document explains how to write I/O drivers for devices that are not supported by DIGITAL software, and how to load these drivers into the VAX/VMS operating system.

4.24 Introduction to VAX-11 Record Management Services

This document contains a general description of the native-mode record management services of the VAX/VMS operating system. The information in this document is introductory in nature; hence, programming techniques are not presented.

4.25 VAX-11 Record Management Services Reference Manual

This document describes VAX-11 Record Management Services (RMS). It provides detailed information on the use of VAX-11 RMS facilities with the VAX/VMS operating system.

4.26 VAX-11 Record Management Services User's Guide

This document contains detailed information on using the capabilities of VAX-11 RMS efficiently. Typical examples are provided to illustrate programming concepts.

4.27 IAS/RXS-11M RMS-11 MACRO Programmer's Reference Manual

This document provides a complete description of Record Management Services for PDP-11 (RMS-11) as set up on an RSX-11M or IAS operating system. RMS-11 files can be organized sequentially, relatively, or with embedded indexes. The document will help system programmers using MACRO-11 to declare RMS-11 facilities, access fields in control blocks at run time, allocate and initialize control blocks, and perform file and record operations.

4.28 Introduction to RMS-11

This document describes RMS-11 concepts and facilities. It explains how to build and access files, summarizes RMS-11 operations, and describes the run-time environment. Since RMS-11 runs in compatibility mode, see the *VAX-11/RSX-11M Programmer's Reference Manual* and the *VAX-11/RSX-11M User's Guide* for additional information about using RMS-11 on VAX/VMS.

4.29 RSX-11M RMS-11 V1.5 Utilities User's Guide

This document describes the operation and use of RMS-11 utilities as follows:

- DEFINE – create files
- CONVERT – move data from one file to another
- BACKUP – create back-up copies of files
- DISPLAY – list attributes of RMS-11 files and names of back-up files
- RESTORE – restore back-up files to their original state

On VAX/VMS, RMS-11 utilities are run in compatibility mode; therefore, see the *VAX-11/RSX-11M Programmer's Reference Manual* and the *VAX-11/RSX-11M User's Guide* for additional information.

4.30 VAX-11 SORT User's Guide

This document describes how to use the VAX-11 SORT utility program, and is written for the full range of VAX/VMS system users. VAX-11 SORT can perform different types of sorting operations and can accept a variety of specifications. VAX-11 SORT operates in native mode.

4.31 PDP-11 SORT Reference Manual

This document describes the features and operations of the PDP-11 SORT utility program. PDP-11 SORT can perform different types of sorting operations and can accept a variety of specifications. PDP-11 SORT operates in compatibility mode.

4.32 VAX-11 FORTRAN IV-PLUS Language Reference Manual*

This document describes the FORTRAN language elements supported by VAX-11 FORTRAN IV-PLUS. It is intended to be used as a reference manual in preparing FORTRAN source programs. It is not a tutorial document, nor does it present information on the FORTRAN user's interface to the VAX/VMS operating system.

4.33 VAX-11 FORTRAN IV-PLUS User's Guide*

This document describes how to compile, link, debug, and execute programs written in the VAX-11 FORTRAN IV-PLUS language, using the facilities of the VAX/VMS operating system. It also contains other information of interest to FORTRAN programmers; for example, error processing, programming efficiency, compatibility with PDP-11 FORTRAN, and FORTRAN input/output.

4.34 PDP-11 FORTRAN Language Reference Manual and Update Notice No. 1*

This document describes PDP-11 FORTRAN IV, which is supported by VAX/VMS in compatibility mode. It defines the elements of FORTRAN and the structure of FORTRAN programming and describes the components of a FORTRAN statement. Also included are descriptions of assignment, control, input/output, format, specification statements, as well as how to use FORTRAN library subprograms or write your own. The manual does not include system-dependent information; see the *IAS/RSX FORTRAN IV User's Guide* for this information. The update gives clarification on relationships between PDP-11 FORTRAN IV and PDP-11 FORTRAN IV-PLUS (which is not supported by VAX/VMS). It also includes a new appendix covering virtual arrays.

4.35 IAS/RSX FORTRAN IV User's Guide*

This document describes the procedures for compiling, linking, and executing IAS/RSX FORTRAN IV programs. It also explains the FORTRAN Object Time System, a collection of routines that includes mathematics, utilities, input/output handlers, and system services. OTS routines are selected optionally during installation. On VAX/VMS, PDP-11 FORTRAN operates in compatibility mode.

4.36 VAX-11 COBOL-74 Language Reference Manual*

This document describes the VAX-11 COBOL-74 programming language, including its organization, syntax, and semantics. For system-dependent information, see the *VAX-11 COBOL-74 User's Guide*.

4.37 VAX-11 COBOL-74 User's Guide*

This document describes the use of VAX-11 COBOL-74. It includes procedures for compiling, linking, and running VAX-11 COBOL-74 programs. The User's Guide lists compiler, RMS, and Run-Time System diagnostics. VAX-11 COBOL-74 operates in compatibility mode and generates native-mode object modules.

4.38 PDP-11 COBOL Language Reference Manual*

This document describes the PDP-11 COBOL programming language, including its organization, syntax, and semantics. For system-dependent information, see the *PDP-11 COBOL User's Guide*.

4.39 PDP-11 COBOL User's Guide*

This document describes the use of PDP-11 COBOL. It includes procedures for compiling, task-building, and running PDP-11 COBOL programs. The User's Guide lists compiler, RMS-11, and Object-Time System diagnostics. On VAX/VMS, PDP-11 COBOL operates in compatibility mode and generates compatibility-mode object programs.

4.40 PDP-11 COBOL Pocket Guide*

This booklet contains the general formats for PDP-11 COBOL statements; it also includes other frequently-needed information, such as data formats, in a convenient form.

4.41 PDP-11 BASIC-PLUS-2 Language Reference Manual*

This document describes the BASIC-PLUS-2 programming language, an extension of BASIC-11 with some advanced features. It also introduces programming in BASIC, and explains BASIC-PLUS-2 statements, functions, commands, and error messages. The document is arranged to help the beginner acquire knowledge gradually. For system-dependent information, see the *BASIC-PLUS-2 RSX-11M/IAS User's Guide*.

4.42 BASIC-PLUS-2 RSX-11M/IAS User's Guide*

This document describes the procedures for using BASIC-PLUS-2 on an RSX-11M or IAS operating system, including system-dependent features, utilities, and the use of assembly-language routines in BASIC-PLUS-2 programs. On VAX/VMS, BASIC-PLUS-2 operates in compatibility mode.

4.43 DECnet-VAX System Manager's Guide and Update Notice No. 1*

This document tells the DECnet system manager how to control, monitor, and test a DECnet-VAX system, and how to down-line load a DECnet-11S node.

4.44 DECnet-VAX User's Guide and Update Notice No. 1*

This document describes the programmed requests and terminal functions that allow a DECnet-VAX node to communicate with another DECnet node. It explains how to write a MACRO or FORTRAN program to perform intertask communications and remote file access. Also, it describes interactive facilities used to transfer files to and from remote nodes.

4.45 User's Guide To DATATRIEVE-11*

This document describes the use of DATATRIEVE-11 to extract, display, create, and change data from RMS-11K files. On VAX/VMS, DATATRIEVE-11 operates in compatibility mode.

4.46 BLISS-32 Language Guide*

This document is a combined tutorial and reference manual for the BLISS-32 programming language. BLISS-32 is oriented toward system-programming usage, and is primarily intended for knowledgeable users of the VAX-11/780 and the VAX/VMS operating system.

4.47 VAX-11 BLISS-32 User's Guide*

This document describes the VAX-11 BLISS-32 compiler and its use, and gives basic information about linking, executing, and debugging BLISS-32 programs. It also describes BLISS-32 machine-specific functions, BLISS tools, and other topics relevant to BLISS-32 programming.

4.48 BLISS Pocket Guide*

This guide presents a syntax summary for the family of BLISS language dialects consisting of BLISS-16C, BLISS-32, and BLISS-36. It describes the Common BLISS language features that constitute the bulk of all three dialects, plus the additional system-specific features unique to each dialect. A summary of the command line syntax for the respective compilers is also provided.

5.0 TOPICAL INDEX

The following topical index contains entries to important information in Volumes 1 through 3 of the VAX-11 software documentation set. No attempt was made to compile an exhaustive index; rather, topics were selected on the basis of their general importance to VAX/VMS users.

A five-letter code is used in the index to represent each individual document. Page numbers are not included in this index; therefore, to pinpoint an item of interest by page number, you must go to the Table of Contents and the index in the specified document.

In some cases, a topic has more than one document code specified. When this occurs, the first code identifies the document that contains introductory information, while later codes identify documents that contain detailed information on the subject.

The documents referred to in the index and their identifying codes are listed below.

COMAN	– VAX/VMS Command Language User's Guide
DEBUG	– VAX-11 Symbolic Debugger Reference Manual
DRIVR	– VAX/VMS Guide to Writing a Device Driver
DSCUG	– VAX-11 Disk Save and Compress User's Guide
INSTA	– VAX-11 Software Installation Guide
INTRO	– Introduction to VAX-11 Record Management Services
IOUGD	– VAX/VMS I/O User's Guide
LINKR	– VAX-11 Linker Reference Manual
MACRF	– VAX-11 MACRO Language Reference Manual
MACUG	– VAX-11 MACRO User's Guide
MODGD	– VAX-11 Guide to Creating Modular Library Procedures
OPGUI	– VAX/VMS Operator's Guide
PRIMR	– VAX/VMS Primer

RMSRF — VAX-11 Record Management Service Reference Manual
 RMSUG — VAX-11 Record Management Services User's Guide
 RUNTM — VAX-11 Common Run-Time Procedure Library Reference Manual
 SSREF — VAX/VMS System Services Reference Manual
 SUMAR — VAX/VMS Summary Description
 SYMAN — VAX/VMS System Manager's Guide
 TEXED — VAX-11 Text Editing Reference Manual
 11MRF — VAX-11/RSX-11M Programmer's Reference Manual
 11MUG — VAX-11 RSX-11M User's Guide

Documents missing from the above list are not referenced in the topical index. The following list is supplied to identify the topics not included in the index and their associated documents. Refer to Table 1 to obtain document titles and order number.
