

Information on a tape can still be read by the system when the tape is write protected. If you have read errors, or if write errors continue to occur when the tape is write enabled, try another tape cartridge.

System Problems Caused by TK50

If you suspect that the TK50 has caused your system to fail during operation, set the LOAD/UNLOAD switch to its UNLOAD (out) position. The tape will rewind to its UNLOAD position. Follow the procedures for removing the tape from the drive. (See Chapter 3, steps 1 through 4.)
