Your interest in the new DEC Programmed Data Processor is greatly appreciated. Enclosed is literature concerning the order code and basic machine specifications for your information. Also included is a copy of the November-December DATAMATION article on PDP for your files.

The Programmed Data Processor described in the enclosed material will also be available in our PDP-3 model which will have 36 bit word structure and will be capable of accommodating multiple 4096 word memory modules. This model will be capable of performing approximately 40,000 multiplications per second.

Optional features that will be available for either of these machines will include an XY oscilloscope, photoelectric light pen for use with scope, photoelectric paper tape reader, and magnetic tape units.

Prices on the Programmed Data Processor begin at approximately \$85,000 and deliveries will commence in about three months.

Our engineers are available to discuss PDP with you in greater detail. If you have a specific application in mind, or would like to receive additional literature as it becomes available, please return the enclosed reply card.
