

MOUNTING BAR**TYPE K941****BAR SUPPORT****TYPE K940****K****SERIES**

This versatile mounting bar holds one to four H800 connector blocks, for systems of up to 32 modules. Enclosures as small as 16" x 12" x 10" accommodate 16-module systems with one K716 interface block. Mounting bars with three or four H800 blocks require enclosures 16" wide, 10" and 12" deep, respectively. Densities approach 50 relay-equivalents per cubic foot, without crowding.

Two #10 screws on 4-inch centers, 6 inches from left edge of door serve to bolt in a K940 bar support. Two slotted hex bolts secure the mounting bar, positioned by a 1/4" guide pin, to facilitate simple installation.

For shipping, or other circumstances, or where severe vibration is encountered, a plate mounted flush with the left edge of enclosure opening retains modules when door is closed. Hardware for mounting connector blocks is included.

K940 — \$3.00
K941 — \$6.00
