PDP-X Technical Memorandum # 23

Title: PDP-X Software Schedule

Author: W. Segal

Index Key: Software Schedule

Distribution Key: B, C

Obsolete: None

Revision: None

Date: September 20, 1967

The attached chart shows the schedule of systems software tasks for the next 22 months. The allocation of manpower to the projects is subject to change depending on

- a) finding the right programmers at the right time
- b) task redefinition
- c) hardware availability

The designations I and II refer to the model numbers as described in section 1.1 of "PDP-X Technical Memorandum #13". The software will be upward compatible from model I to model II at the source level. For example, the FORTRAN on model I will be a subset of that on model II and a source file for model I will compile directly with the model II FORTRAN.

In general, specifications for each task will be written and circulated at the beginning of each project.
